Managed Hosting

As a leader in the managed services world, Xand offers a wide range of technology services including traditional data center services (Colocation and Managed Server Hosting) along with virtualization, and optimized cloud based services in a cost-efficient and reliable platform for its customers.

Hosting with Xand can turn IT into a powerful competitive advantage for your business through an on-demand IT Infrastructure.

MANAGED SERVER HOSTING

Utilizing award winning Dell hardware, Xand can provide the ideal architecture to support your business through the Managed Services offering. The Xand foray into the Data Center business began as an MSP providing hosting services for small businesses, startups, and Fortune 1000 clients that simply wanted to focus on their business. As an MSP, Xand can build a reliable, scalable and secure environment and provide the 24x7x365 engineering resources needed to maintain and monitor the systems, so you can focus on your own business.

OPTIMIZED COMMUNICATIONS

Xand offers an extremely resilient network fabric utilizing multiple redundant Internet providers to deliver OCx diverse carrier access. In addition, Xand owns and operates our own private fiber optic ring from Xand to two NYC carrier hotels. Fully burstable up to 100Mbps and BGP blended Tier 1 Internet connectivity can be allocated to your environment based on your business needs.

All Managed Servers Include: Basic Monitoring, Full Event Logs, Xcare™
24 x 7 Support, DNS Management.

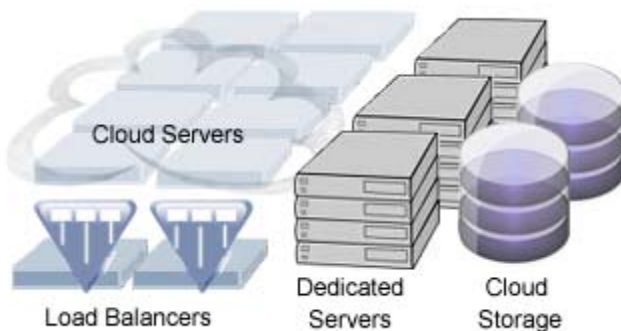

Additional Services:

- Additional Bandwidth
- Tape Backup
- Colocation
- Anti-Virus/Anti-Spam
- Virtual Private Network
- Wide Area Network
- SSL Acceleration
- Shared SQL Server
- Dedicated Firewall
- Shared Firewall
- E-mail Accounts
- IP Addresses
- Advanced Monitoring
- Load Balancing

PRIVATE CLOUD HOSTING

Xand has vetted the virtualization technologies to develop an Adaptive eStructure™ platform. As a Certified VMware Service Provider Partner we can give you all the benefits of virtualization and deliver a Private Cloud environment to run your business.

The Xand team builds exclusive VM clusters for each individual client. With vCloud Director Xand can properly assess your requirements and build an environment specific to the unique capacity, processing power, security and compliance model that your business demands. This presents a perfect offering for those that prefer an OPEX model with dedicated resources, and the highest levels of performance, scalability and security.

VIRTUAL DISASTER RECOVERY

Xand's virtualized business continuity solution provides reliability at a reduced cost. Xand leverages its high-speed data transfer network and a variety of replication and data backup technologies to deliver a best of breed solution to meet your needs.

“Cloud computing, aka “utility computing” is nothing new to Xand. Xand has been delivering virtualization services and enablement solutions to ASP's, ISV's and the like for the past decade.”
